Fully differential comparator for overcurrent protection

Tesi di Laurea Magistrale in
Electronic Engineering - Ingegneria elettronica

Author: **Lorenzo Perlo**

Student ID: 996702
Advisor: Prof. Andrea Leonardo Lacaita
Co-advisors: Martin Dřínovský
Academic Year: 2024-25

Abstract

Here goes the Abstract in English of your thesis followed by a list of keywords. The Abstract is a concise summary of the content of the thesis (single page of text) and a guide to the most important contributions included in your thesis. The Abstract is the very last thing you write. It should be a self-contained text and should be clear to someone who has not (yet) read the whole manuscript. The Abstract should contain the answers to the main scientific questions that have been addressed in your thesis. It needs to summarize the adopted motivations and the adopted methodological approach as well as the findings of your work and their relevance and impact. The Abstract is the part appearing in the record of your thesis inside POLITesi, the Digital Archive of PhD and Master Theses (Laurea Magistrale) of Politecnico di Milano. The Abstract will be followed by a list of four to six keywords. Keywords are a tool to help indexers and search engines to find relevant documents. To be relevant and effective, keywords must be chosen carefully. They should represent the content of your work and be specific to your field or subfield. Keywords may be a single word or two to four words.

Keywords: here, the keywords, of your thesis

Abstract in lingua italiana

Qui va l'Abstract in lingua italiana della tesi seguito dalla lista di parole chiave.

Contents

Introduction

This document is intended to be both an example of the Polimi LaTeX template for Master Theses, as well as a short introduction to its use. It is not intended to be a general introduction to LaTeX itself, and it is assumed that the reader is familiar with the basics of creating and compiling LaTeX documents (see [4, 6]).

The cover page of the thesis must contain all the relevant information: title of the thesis, name of the Study Programme and School, name of the author, student ID number, name of the supervisor, name(s) of the co-supervisor(s) (if any), academic year. The above information is provided by filling in all the entries in the command `\puttitle{}` in the title page section of this template.

Be sure to select a title that is meaningful. It should contain important keywords to be identified by the indexer. Keep the title as concise as possible and comprehensible even to people who are not experts in your field. The title has to be chosen at the end of your work so that it accurately captures the main subject of the manuscript.

Since a thesis might be a substantial document, it is convenient to break it into chapters. You can create a new chapter as done in this template by simply using the following command

`\chapter{Title of the chapter}`

followed by the body text.

Especially for long manuscripts, it is recommended to give each chapter its own file. In this case, you write your chapter in a separated `chapter_n.tex` file and then include it in the main file with the following command

`\input{chapter_n.tex}`

It is recommended to give a label to each chapter by using the command.

`\label{ch:chapter_name}%`

where the argument is just a text string that you will use to reference that part as follows:
Chapter 1 contains AN INTRODUCTION TO . . . .

If necessary, an unnumbered chapter can be created by

\chapter*{Title of the unnumbered chapter}

1 | Chapter one

In this chapter additional useful information are reported.

1.1. Sections and subsections

Chapters are typically subdivided into sections and subsections, and, optionally, sub-subsections, paragraphs and subparagraphs. All can have a title, but only sections and subsections are numbered. A new section is created by the command

`\section{Title of the section}`

The numbering can be turned off by using `\section*{}`.
A new subsection is created by the command

`\subsection{Title of the subsection}`

and, similarly, the numbering can be turned off by adding an asterisk as follows

`\subsection*{}`

1.2. Equations

This section gives some examples of writing mathematical equations in your thesis.

Maxwell's equations read:

$$\begin{cases} \nabla \cdot \boldsymbol{D} = \rho, & (1.1a) \\ \nabla \times \boldsymbol{E} + \dfrac{\partial \boldsymbol{B}}{\partial t} = \boldsymbol{0}, & (1.1b) \\ \nabla \cdot \boldsymbol{B} = 0, & (1.1c) \\ \nabla \times \boldsymbol{H} - \dfrac{\partial \boldsymbol{D}}{\partial t} = \boldsymbol{J}. & (1.1d) \end{cases}$$

Equation (1.1) is automatically labeled by `cleveref`, as well as Equation (1.1a) and Equation (1.1c). Thanks to the `cleveref` package, there is no need to use `\eqref`.

Remember that Equations have to be numbered only if they are referenced in the text.

Equations (1.2), (1.3), (1.4), and (1.5) show again Maxwell's equations without brace:

$$\nabla \cdot \boldsymbol{D} = \rho, \tag{1.2}$$

$$\nabla \times \boldsymbol{E} + \frac{\partial \boldsymbol{B}}{\partial t} = \boldsymbol{0}, \tag{1.3}$$

$$\nabla \cdot \boldsymbol{B} = 0, \tag{1.4}$$

$$\nabla \times \boldsymbol{H} - \frac{\partial \boldsymbol{D}}{\partial t} = \boldsymbol{J}. \tag{1.5}$$

Equation (1.6) is the same as before, but with just one label:

$$\begin{cases} \nabla \cdot \boldsymbol{D} = \rho, \\ \nabla \times \boldsymbol{E} + \dfrac{\partial \boldsymbol{B}}{\partial t} = \boldsymbol{0}, \\ \nabla \cdot \boldsymbol{B} = 0, \\ \nabla \times \boldsymbol{H} - \dfrac{\partial \boldsymbol{D}}{\partial t} = \boldsymbol{J}. \end{cases} \tag{1.6}$$

1.3.   Figures, Tables and Algorithms

Figures, Tables and Algorithms have to contain a Caption that describe their content, and have to be properly reffered in the text.

1.3.1.   Figures

For including pictures in your text, you can use `TikZ` for high-quality hand-made figures, or just include them as usual with the command.

`\includegraphics[options]{filename.xxx}`

Here xxx is the correct format, e.g. `.png`, `.jpg`, `.eps`, ...

Figure 1.1: Caption of the Figure to appear in the List of Figures.

Thanks to the `\subfloat` command, a single figure, such as Figure 1.1, can contain multiple sub-figures with their own caption and label, e.g. Figure 1.2a and Figure 1.2b.

(a) One PoliMi logo.

(b) Another one PoliMi logo.

Figure 1.2: This is a very long caption you don't want to appear in the List of Figures.

1.3.2. Tables

Within the environments `table` and `tabular` you can create very fancy tables such as the one shown in Table 1.1.

Title of Table (optional)

	column 1	column 2	column 3
row 1	1	2	3
row 2	α	β	γ
row 3	alpha	beta	gamma

Table 1.1: Caption of the Table to appear in the List of Tables.

You can also consider to highlight selected columns or rows in order to make tables more

readable. Moreover, with the use of `table*` and the option `bp` it is possible to align them at the bottom of the page. One example is presented in Table 1.2.

	column1	column2	column3	column4	column5	column6
row1	1	2	3	4	5	6
row2	a	b	c	d	e	f
row3	α	β	γ	δ	ϕ	ω
row4	alpha	beta	gamma	delta	phi	omega

Table 1.2: Highlighting the columns

	column1	column2	column3	column4	column5	column6
row1	1	2	3	4	5	6
row2	a	b	c	d	e	f
row3	α	β	γ	δ	ϕ	ω
row4	alpha	beta	gamma	delta	phi	omega

Table 1.3: Highlighting the rows

1.3.3. Algorithms

Pseudo-algorithms can be written in LaTeX with the `algorithm` and `algorithmic` packages. An example is shown in Algorithm 1.1.

Algorithm 1.1 Name of the Algorithm
___
1: Initial instructions
2: **for** $for - condition$ **do**
3:     Some instructions
4:     **if** $if - condition$ **then**
5:         Some other instructions
6:     **end if**
7: **end for**
8: **while** $while - condition$ **do**
9:     Some further instructions
10: **end while**
11: Final instructions

1.4. Theorems, propositions and lists

1.4.1. Theorems

Theorems have to be formatted as:

Theorem 1.1. *Write here your theorem.*

Proof. If useful you can report here the proof.

1.4.2. Propositions

Propositions have to be formatted as:

Proposition 1.1. *Write here your proposition.*

1.4.3. Lists

How to insert itemized lists:

- first item;

- second item.

How to insert numbered lists:

1. first item;

2. second item.

1.5. Use of copyrighted material

If necessary, each student is responsible for obtaining copyright permissions to include published material in the thesis. This applies typically to third-party material published by someone else.

1.6. Plagiarism

You must be sure to respect the rules on Copyright and avoid involuntary plagiarism. It is allowed to take other persons' ideas only if the author and his original work are clearly mentioned. As stated in the Code of Ethics and Conduct, the Politecnico di Milano *promotes the integrity of research, condemns manipulation and infringement of intellectual*

property, and allows all those who carry out research activities to have adequate training on ethical conduct and integrity while doing research. To be sure to respect the copyright rules, read the guides on Copyright legislation and citation styles available at:

`https://www.biblio.polimi.it/en/tools/courses-and-tutorials`

You can also attend the courses periodically organized on "Bibliographic citations and bibliography management".

1.7. Bibliography and citations

Your thesis must contain a suitable Bibliography which lists all the sources consulted on developing the work. The list of references is placed at the end of the manuscript after the chapter containing the conclusions. We suggest using the BibTeX package and saving the bibliographic references in the file `Thesis_bibliography.bib`. This is indeed a database containing all the information about the references. To cite in your manuscript, use the `\cite{}` command as follows:

Here is how to quote bibliography entries: [2], or multiple entries at once: [3, 5].

The bibliography and the reference list are automatically generated by running BibTeX [1].

2 | Conclusions and future developments

In this chapter a final chapter containing the main conclusions of your research/study and possible future developments of your work have to be inserted.

A | Appendix A

If you need to include an appendix to support the research in your thesis, you can place it at the end of the manuscript. An appendix contains supplementary material (figures, tables, data, codes, mathematical proofs, surveys, . . .) which supplement the main results contained in the previous chapters.

B | Appendix B

It may be necessary to include another appendix to better organize the presentation of supplementary material.

List of Figures

List of Tables

List of Symbols

Variable	Description	SI unit
$\boldsymbol{u}$	solid displacement	m
$\boldsymbol{u}_f$	fluid displacement	m
